

Since its establishment in 1979, the UNION OF NURSING, SATSE, fights for the rights of professionals in Nursing and Physiotherapy, and works every day for the development of the profession. Nowadays, more than 110,000 professionals of Nursing and Physiotherapy integrate the organization.

THE CHALLENGE

The union looked for providing a more functional infrastructure to the training and lectures room, where the press conferences of the organization also take place. It was intended to provide an interactive tool that would be integrated with the architecture of the room, and that would allow enriching the presentations and trainings, made with a large television without interactivity until that moment.

THE SOLUTION

SATSE found in Newline the perfect ally that would provide a light device that could be integrated into the back of the room. Thanks to the interactive screen **TT-7518VN** in the trainings, lectures and press conferences the annotation function can be used on the content that is being displayed, or interact and share with other devices. Also, the Optical Bonding technology provides a 178° viewing angle and a superior touch accuracy.

THE RESULTS

In the different events that take place in the lectures room, an infinite number of resources can be used in order to enrich the content of the presentations and consequently, they get to involve the audience much more. Also, the instantaneous wireless projection on the screen by the participants allows interaction immediately.

In addition, the annotation function on other contents (Microsoft Office documents, Internet, videos, etc.) allows to save and share with the attendees the notes taken during the sessions.
