

weber

Weber (Weber, Economy and Health) is a consultancy specialized in the economic evaluation of health technologies, founded in 2012. Its main objective is to provide efficient solutions for care and treatment processes, in order to help improve the sustainability of the system and the quality of life of patients.

THE CHALLENGE

The company looked for having a multi purpose meeting room, that not only could hold internal meetings, but also provide the possibility to have videoconference with the external partners and customers. In the past, they just had a TV with a conference system and a flipchart.

THE SOLUTION

WEBER found in Newline the perfect solution with the X6, a touchscreen that performs all the features that they needed for their meeting room, with just one device. Thanks to this all-in-one, in the presencial and virtual meetings, the annotation function can be used on the content that is being displayed, using any typical presentation software or interact and share with other devices with the Newline collaboration software. Also, the Optical Bonding technology provides a 178° viewing angle, a superior touch accuracy and a smooth writing experience.

THE RESULTS

In all the meetings that the company members hold internally, with customers or healthcare professionals, an infinite number of resources can be used in order to enrich the content of the presentations. The annotation function on other contents (Microsoft

Office documents, Internet, videos, etc.) allows to save and share the notes. Also, the instantaneous wireless projection on the screen by the participants allows interaction immediately. All this combined with the possibility to hold high quality videoconferences, makes the X6 the perfect ally for the company.
